**PRODUCT DATA SHEET**

**WS-575-SP**

**Flip-Chip Flux**

### Introduction

*Flip-Chip Flux WS-575-SP* is a liquid flux specifically designed to meet process needs for direct chip attach of fine-pitch flip-chips (<0.5mm). *WS-575-SP* eliminates compatibility issues with underfills by having a completely water-cleansable residue.

### Features

- Water-soluble
- Halogen-free (not intentionally added)
- Suitable for spray applications
- Suitable for SnPb and Pb-free applications
- Non-corrosive to underbump metallization

### Properties

### Application

Recommended flux amount: 500–1,500 micrograms/mm², depending on flip-chip.

For spray applications, the flux storage tank should hold enough flux for one 8-hour shift. Additional flux remaining in tank may expire (pot life <10 hours at room temperature) if left for a prolonged amount of time. Spray equipment should also be cleaned frequently to ensure uniform spray deposition and flux purity.

### Cleaning

The material can be cleaned with DI water, or water with an added cleaner. Ideal conditions for spray-cleaning: 25°C (room temperature) or higher for >1 minute at >60psi.

### Packaging

*WS-575-SP* is available in 100g to 1 gallon (3.8 liter) containers. Other packaging can be provided to meet specific requirements.

### Storage

Storage temperatures should not exceed 25°C for more than 4 days, and should never exceed 30°C. Colder storage (as low as -25°C) can be used to maximize the shelf life. After removing from cold storage, *WS-575-SP* should be allowed to stand for at least 4 hours at room temperature before using.

Reflow
Recommended Profile:

Peak reflow temperature should be <340°C in an air or nitrogen atmosphere (<100ppm O₂), with a linear ramp up to 30°C above liquidus temperature. These profiles are recommended to the user as starting points, and should be optimized by the user to meet their individual process needs.
