**PRODUCT DATA SHEET**

**Semiconductor-Grade Preforms**

88Au/12Ge

---

**Introduction**

The need for high-temperature solders is growing as RF and power semiconductor devices continue to get smaller, with power density increasing both as a consequence of the shrink and as a result of increased power ratings. Indalloy® 182 (80Au/20Sn eutectic solder) has been the workhorse for high-temperature, high-reliability, die-attach applications for many years. However, as junction temperatures (Tj) increase, the gold-tin eutectic solder is beginning to reach its limit of utility. Higher temperatures cause increased thermal fatigue and delamination can also be seen at the solder joints.

The next option for RF and power semiconductor manufacturers needing higher temperatures is 88Au/12Ge. The melting temperature of 88Au/12Ge is 356°C (eutectic).

The traditional 88Au/12Ge alloy has poor solderability, which manifests as large voids in the bond. Voids are poor conductors of heat which create hot spots, and are the primary cause of premature failures.

Indium Corporation developed a semiconductor-grade 88Au/12Ge that increases solderability and decreases voiding%.

**Technical Service**

Indium Corporation has a team of certified process engineers to help you select the best material for your manufacturing process. When you involve our technical experts in the initial design of your process, they can help ensure you develop an efficient and cost-effective solution. Indium Corporation has technical staff available around the globe with the skills and experience to assist you in developing your design, assembly, or process.

---

**Packaging**

Preform packaging is critical for two reasons:

- Protection during shipping and handling
- Ease of introduction into the manufacturing process

Because of these needs, Indium Corporation offers several packaging alternatives:

- Jar or bulk pack
- Bulk tray pack
- Array tray pack
- Tape & reel
- Waffle pack

We also can create customized packaging solutions to meet your needs and processes.
