PoP Paste Indium9.88

Features
- Eliminates defects due to package-warping
- Air-reflow
- Rheology optimized for both dipping and package-retention
- Designed for use with SAC305
- Excellent solderability
- Long pot life
- Suitable for use down to 0.4mm pitch

Introduction
PoP Paste Indium9.88 is a no-clean solder paste designed for use in package-on-package (0.4mm and larger) applications. PoP Paste Indium9.88 has a rheology designed to provide a long-lasting dipping process.

All information is for reference only. Not to be used as incoming product specifications.

Application
Solder paste is applied to the spheres in a doctor-bladed dipping process (Figure 1).
- Typical package-on-package applications only need dipping to 25-45% of the sphere height.

Alloys
PoP Paste Indium9.88 is available only with SAC305 (96.5Sn/3.0Ag/0.5Cu). The following table shows the alloy properties.

Care must be taken to avoid contaminating the bottom of the package itself with PoP paste, as this may cause bridging defects.

Figure 1: Dipping Process
Consistent solder paste volumes are reproducibly attained from dipping 0.4mm or higher pitch packages in the PoP Paste Indium9.88. Figure 2 is an example of a PoP process where a 0.5mm pitch BGA package has been dipped in 8mil thickness (~50% of ball height) PoP Paste Indium9.88

Cleaning
Although designed as a no-clean material, the residue from the PoP Paste Indium9.88 may be cleaned using appropriate cleaning solutions. Please consult with Indium Corporation Technical Service personnel for details.

Packaging
PoP Paste Indium9.88 is available in airless (bubble-free) packaging:
For automated dispense applications:
75g (30cc) syringes with an air-pressure plunger

Other packaging may be available to meet specific requirements. Consult with Indium Corporation Sales or Technical Service staff for details.

Storage and Handling
PoP Paste Indium9.88 syringes and cartridges should be stored tip down at <10°C for a maximum of 6 months. Storage temperatures should not exceed 30°C for more than 4 days. PoP Paste Indium9.88 should be allowed to stand for at least 4 hours at room temperature before using.

Once removed from cold storage, the solder paste in a sealed syringe may remain at room temperature for up to 7 days before usage and during usage. However, once outside the syringe, its working life is estimated to be 8 hours, and may be less under high temperature (>25°C) and humidity (>70%RH) conditions.

The paste should not be subjected to multiple cold/heat cycles or viscosity changes and/or flux separation may occur.

Technical Support
Indium Corporation sets the industry standard in providing rapid response, on-site technical support for our customers worldwide. Indium’s team of Technical Support Engineers can provide expertise in all aspects of Materials Science and Semiconductor Packaging process applications.

Reflow
Recommended Profile:

A short preheat (150-160°C) for less than 45 seconds may be used to reduce solder balling caused by excess paste. The profile should ideally be a linear ramp at 1-2°C/second up to 20-30°C above solidus temperature, with a rapid cool down afterwards, and a minimum time above liquidus of 20 seconds.
