Introduction

**WS-446-AL Ball-Attach Flux** is a thixotropic flux designed for use in pin transfer applications for ball-attachment to substrates (BGA manufacturing). Its rheology is specifically designed for use with even the smallest gravity-fed spheres. **WS-446-AL** has an activator system powerful enough to promote wetting on the most demanding substrate metallizations. The flux is a distinctive red color, which aids automated level-sensing equipment and also enhances visual inspection.

Features

- Flux rheology applicable for all sphere sizes
- Suitable for Pb-free or Sn/Pb applications
- Uniform pin transfer over extended periods
- Red color for ease of detection
- Proven high yields in ball-attach process
- Excellent solderability on a wide range of surfaces

Cleaning

**WS-446-AL** residue can be cleaned with DI water, or water with an added cleaner. Ideal conditions for spray-cleaning: 25°C (room temperature) or higher for >1 minute at >60psi.

Packaging

**WS-446-AL** is available in (10) 150g syringes and in 100g jars or cartridges. Other packaging can be provided to meet the customer’s specific requirements.

Storage

For maximum shelf life **WS-446-AL** syringes and cartridges should be stored tip down. Storage temperatures should not exceed 30°C. After removing from cold storage, **WS-446-AL** should be allowed to stand for at least 4 hours at room temperature before using.

Reflow Recommended Profile:

Peak reflow temperature should be <350°C in an air or nitrogen atmosphere (<500ppm O₂), with a linear ramp up to 30°C above liquidus temperature. These profiles are recommended to the user as starting points, and should be optimized by the user to meet their individual process needs.
