

## PRODUCT DATA SHEET

# Indium5.7LT-1 with Indalloy®301

## Low-Temperature Solder Paste

### Introduction

**Indium5.7LT-1 with Indalloy®301** is a patented, novel, air reflow, halogen-free, no clean solder paste for low-temperature reflow processes which require high drop shock and/or thermal cycling reliability. **Indium5.7LT-1 with Indalloy®301** is ideal for high-reliability applications, which utilize thermally sensitive components. The low activation temperature of **Indium5.7LT-1** in combination with **Indalloy®301** can be especially useful as a low-temperature, Pb-free solution.

### Features

- Excellent drop shock reliability—comparable to SAC
- Reflow below 220°C
- Melting temperature above 180°C
- Low-temperature Pb-free solution
- Outstanding printing transfer efficiency with low variation between prints
- Clear post-reflow flux residue
- Halogen-free per EN14582 test method

### Flux Vehicle

**Indium5.7LT-1** is an air reflow, halogen-free, no-clean solder paste designed for assembly processes using Bi-based and In-containing low-temperature alloys. This paste is a clear residue product with exceptional wetting capabilities. The low activation temperature and high thermal tolerance of **Indium5.7LT-1** enables a fully optimized reflow process.

### Key Applications

Low-temperature solders reduce warpage of thermally sensitive components by reducing peak reflow temperature. However, standard Bi-based low-temperature alloys are unable to withstand even moderate drop shock. **Indium5.7LT-1 with Indalloy®301** is a low-temperature Pb-free solder capable of reducing peak reflow temperature by 30°C relative to SAC305, with drop shock reliability two orders of magnitude greater than standard low-temperature alloys.

### Standard Product Specifications

Flux	Mesh Size	Printing Metal Load
Indium5.7LT-1	Type 4	88.5%

Indium Corporation manufactures low-oxide spherical powders in the industry standard Types 4 and 5-MC mesh sizes. Other non-standard mesh sizes are available upon request. The weight ratio of the flux/vehicle to the solder powder is referred to as the metal load and is typically in the range of 83–92% for standard compositions.

### Storage and Handling Procedures

Refrigerated storage will prolong the shelf life of solder paste. Solder paste packaged in cartridges should be stored tip down.

Storage Conditions (unopened containers)	Shelf Life
<10°C	6 months

Solder paste should be allowed to reach ambient working temperature prior to use. Generally, paste should be removed from refrigeration at least 2 hours before use. Actual time to reach thermal equilibrium will vary with container size. Paste temperature should be verified before use. Jars and cartridges should be labeled with date and time of opening.

### Packaging

Standard packaging for **Indium5.7LT-1 with Indalloy®301** is 500g jars and 600g cartridges. Other packaging options may be available upon request.

### Complementary Products

- **Rework Flux:** TACFlux® 020B-RC, TACFlux® 571HF
- **Liquid Rework Flux:** FP-500

## Low-Temperature Solder Paste

### Printing

#### Stencil Design:

Electroformed and laser cut/electropolished stencils produce the best printing characteristics among stencil types. Stencil aperture design is a crucial step in optimizing the print process. The following are a few general recommendations:

- Discrete components—A 10–20% reduction of stencil aperture has significantly reduced or eliminated the occurrence of mid-chip solder beads. The “home plate” design is a common method for achieving this reduction.
- Fine-pitch components—A surface area reduction is recommended for apertures of 20mil pitch and finer. This reduction will help minimize solder balling and bridging that can lead to electrical shorts. The amount of reduction necessary is process-dependent (5–15% is common).
- A minimum aspect ratio of 1:5 is suggested for adequate release of solder paste from stencil apertures. The aspect ratio is defined as the width of the aperture divided by the thickness of the stencil.

#### Printer Operation:

The following are general recommendations for stencil printer optimization. Adjustments may be necessary based on specific process requirements:

Solder Paste Bead Size	20–25mm in diameter
Print Speed	25–100mm/second
Squeegee Pressure	0.018–0.027kg/mm of blade length
Underside Stencil Wipe	Start at once per every 5 prints and decrease frequency until optimum value is reached
Solder Paste Stencil Life	>12 hours (at 30–60% RH and 22–28°C)

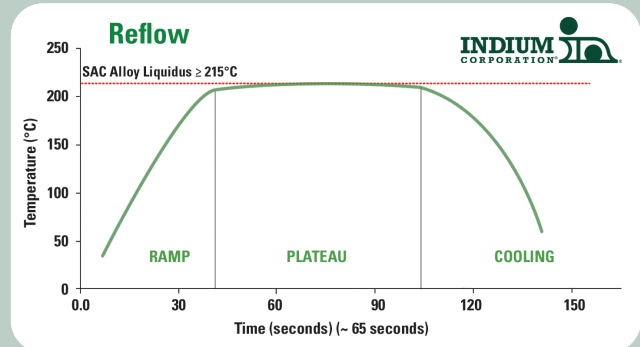

### Cleaning

Indium5.7LT-1 is designed for no-clean applications; however, the flux can be removed, if necessary, by using a commercially available flux residue remover.

**Stencil Cleaning** is best performed using an automated stencil cleaning system for both stencil and misprint cleaning to prevent extraneous solder balls. Most commercially available stencil cleaning formulations including isopropyl alcohol (IPA) work well.

### Reflow

#### Recommended Profile:

This profile is designed for use with **Indium5.7LT-1 with Indalloy®301**. This can be used as a general guideline in establishing a reflow profile for **Indium5.7LT-1 Solder Paste**. Deviations from these recommendations are acceptable, and may be necessary, based on specific process requirements.

#### Ramp Stage:

A linear ramp rate of 1–2°C/second allows gradual evaporation of volatile flux constituents and prevents defects such as solder balling/beading and bridging as a result of hot slump. It also prevents unnecessary depletion of fluxing capacity.

#### Plateau Stage:

A peak temperature ranging from 210–220°C held for 45–90 seconds is needed to form a quality solder joint and achieve acceptable wetting due to the formation of an intermetallic layer.

#### Cooling Stage:

A rapid cool down is desired to form a fine-grain structure. Slow cooling will form a large-grain structure, which typically exhibits poor fatigue resistance. The acceptable cooling range is 0.5–6.0°C/second (2–6°C/second is ideal).

This product data sheet is provided for general information only. It is not intended, and shall not be construed, to warrant or guarantee the performance of the products described which are sold subject exclusively to written warranties and limitations thereon included in product packaging and invoices. All Indium Corporation's products and solutions are designed to be commercially available unless specifically stated otherwise.

All of Indium Corporation's solder paste and preform manufacturing facilities are IATF 16949:2016 certified. Indium Corporation is an ISO 9001:2015 registered company.
